

New Hinge for Heavy Duty doors & hinged side panels as well as FCC doors

Equipto Electronics will be changing the hinges used on the doors and hinged side panels in their Heavy Duty line as well as used on the doors in their FCC line. Aside from ease of manufacturing and installation of the doors or hinged sides at the factory, this change will allow for more adjustability in the doors when replacing a door. Aesthetically the new hinge is more up-to-date as well. The new and old hinges are both shown in the pictures below:

New Flush Hinge

Old Recessed Hinge

This change will be effective for material shipped after 12-31-04. All new custom Heavy Duty doors, hinged side panels & FCC doors quoted after 11-1-04 will be quoted with the new hinge.

For a short time the *old hinge* will still be available on a custom basis. This means that the door or hinged side panel would become a custom item and be priced and scheduled as a custom item. The doors are not interchangeable between old and new. The drilling pattern on the frame is different and the manufacturing of the door is different.

Please contact the factory (800-204-7225) if you have any questions or concerns.
