Sub-Rack Enclosures from Equipto Electronics

Off the shelf card cages and chassis may not be the best solution for your innovative designs. Equipto Electronics can engineer and build the right package to your exact requirements.

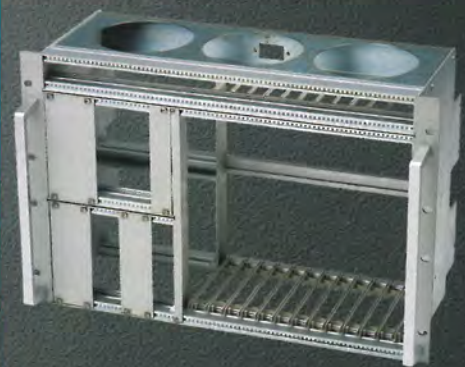

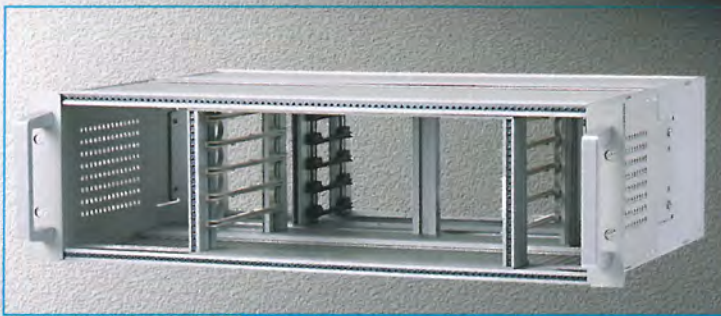

Whatever you need — custom length, width, depth or spacing — an Equipto Electronics packaging solution will complement your design, not compromise it. Special front panels, unique finishes, custom labeling or your logo can be applied during manufacturing, saving you time.

We can create the package you want from your drawings, rough sketches, even conversations. Our emphasis on quality and timely delivery ensure you get what you want when you want it.

Our over 25 years of packaging experience includes all industry standards such as EIA, VME, VXI and Compact PCI. Whether your application is telecom, automated testing, or industrial automation, we can get you to market quickly and cost effectively.

Let our technical staff help you from prototype to production. And as a leading manufacturer of electronics cabinets, we can even help you package your entire project in the industry's best engineered, best built electronic enclosures and racks.

For assistance or additional information, call us toll free at 800-204-7225 or visit our Web site at www.equiptoelec.com.

silk screened labeling.*

We design sub-racks for your needs

Here are some features you may want to include in your custom enclosure.

Construction

Our sub-racks feature two main types of construction: aluminum extrusion or sheet metal based. Extrusion based sub-racks offer rigid construction and a high strength to weight ratio. Sheet metal sub-racks are available in either aluminum or steel and allow for a high degree of customization.

Card Guides

Several varieties of card guides are available. In-metal guides are formed directly in the material and offer light weight and low cost. They are available with or without a PCB "lead in." The lead in helps guide the boards into the correct position as they are inserted.

Plastic card guides are available in both English and metric dimensions. Anti-vibration versions are available. This style features a small finger of plastic that helps grip the board and limit vibration. All plastic guides have a 94V-O flammability rating for regulatory compliance.

Front Panels

Custom front panels are available for any sub-rack. Total customization is available including cutouts, hardware, custom paint, finishing and silk screened labeling.

Custom Finishes

Your sub-rack can be finished in variety of ways. From various anodized finishes for aluminum chassis to color matching in both wet and powder paint, we can deliver your chassis with the finish you require.

Other features

A wide variety of other features are available including chassis handles, wire management features, ventilation and shielding.

In-metal card guides with black anodized finish.

Anti-vibration plastic card guide in aluminum extrusion cage with blue anodize finish.

Modular card cage that accepts multiple card sizes in a single enclosure.

Complete packaging solutions for electronics!

Once you've designed your custom sub-rack, have it installed and delivered in an enclosure configured to your specifications. Equipto Electronics can ship everything you need to help package and protect your innovative designs. We can install backplanes, fans, electrical accessories and cable management...all delivered in a single package, installed and configured to your specifications.
